

○ ○ ○ ○ ○

If you own your home, you can afford solar.

Apex Solar will provide you with a detailed financial analysis. Our report covers the following areas:

- Current usage profile and economic assumptions included in a customized analysis
- Summary of site conditions
- Opportunities to save energy
- Detailed description of how solar electric systems work
- Recommendations for a solar system to fit your specific needs
- Cost analysis, including incentive programs, tax credits and other critical information leading to the economic bottom line
- Financial analysis of what the solar system will do for you economically, including how much:
 - the system will save on your electric bill
 - the system will increase your home's value

- If you finance, our analysis will tell you how much it will cost or save you on a monthly basis, both initially and over time
- As an investment, what its long-term Compounded Annual Rate of Return will be (comparable to stocks, bonds, savings, etc.)
- Environmental analysis showing how much benefit you will create on top of the savings you will generate.

FUTURE SOLUTIONS NOW

How It Works

The four basic components of a residential solar system are:

- 1) Roof or ground mount solar modules
- 2) in-home solar power monitor
- 3) inverter
- 4) electric meter.

Solar modules collect the sun's energy and convert it into electricity. Based on your electricity requirements the appropriate number of modules are connected to form an array. The inverter converts the electricity from direct current (DC) to alternating current (AC) for use in the home. The monitor lets you view the status of your system and its performance, while the standard electric meter displays net power usage. Trim, industry-standard mounting hardware and wiring complete the system, all designed to work together flawlessly and efficiently. Combined with professional installation your solar system is designed to provide you with decades of clean, reliable energy.

1) MODULES

2) MONITOR

3) INVERTER

4) METER

We Are Off and On Grid Experts With Eight Years Remote Power Experience

We have packaged systems with everything you need to get up and running. We'll help you get through all the confusion of which components are right for you.

We provide full system design and installation.

If your system is off grid, and you decide to install the system yourself, we provide all the necessary wiring diagrams, roof plans and install guides for your customized design. We also provide as much on-site walk through or over the phone time as you need.
